

ESB Technician Training Outline

- Only available on WiFi in the space: <https://esb.decaturmakers.org:8000/public/>
- Documentation - "Help" in top right - <http://esb.decaturmakers.org:8000/docs/technicians>
- Account creation - staff or I will create an account for you; you'll get a Slack message from EquipmentStatusBoard with your initial password. You have to change this the first time you log in.
 - Staff or I can reset your password if needed.
- ESB has 3 main interfaces:
 1. The web page available on WiFi in the space (or on VPN for staff) - show status
 2. A Slack app/bot - `/esb-status`, `/esb-status Woodshop`
 3. The public status view: <https://esb-static.decaturmakers.org> (this is a single read-only page on the Internet, updated every time something changes) - show status
- Anyone can report problems with a machine via Slack or (coming soon) scanning a QR code for the machine (must be on WiFi).
 - demo of problem report process via web page <http://esb.decaturmakers.org:8000/public/equipment/39>
 - statuses - Operational, Degraded, Down
 - safety risk and consumable check boxes
 - resulting Slack post
 - demo of problem report process via Slack (TestB) `/esb-report`
 - resulting Slack post
- Technician web view
 - Demo of login
 - Equipment list - documents/manuals, photos, links, history (show one of the metal machines like the new mill)
 - Kanban board -> repair record
 - Repair queue
 - Claim repair, add notes/photos, set status, resolve
 - Importance of adding notes/photos/etc to help build a knowledge base of common problems
- Technician slack interface `/esb-repair`
 - Mark as duplicate or no issue; claim; update; resolve

- Coming soon
 - Equipment scheduling to replace Skedda, integrated with this
 - RFID-controlled machines Oops button -> repair record
- Documentation - "Help" in top right -
