

Equipment Status Board

Member Training

Check equipment before you use it · Report problems in seconds

Why ESB exists

- **One place** to see whether any tool in the space is working — *before* you start a project
- Tracks every machine's status and the repairs in flight
- **Three ways to use it**, no account required:
 -  **Web dashboard** — full status board in your browser
 -  **Kiosk screens** — wall displays around the space
 -  **QR stickers** — scan a specific machine
- Plus **Slack** for status checks and reporting from anywhere

The only thing you must remember: the colors

✓ Operational

! Degraded

✗ Down

Color	Status	What it means
● Green	Operational	No known issues — good to go
● Yellow	Degraded	Works, but has a known problem (or not yet assessed) — use with care
● Red	Down	Not usable — do not run it

- Status is **live** — it reflects the open repair reports right now

Where each tool works

Slack works anywhere — your phone, home, on the road.

The **web dashboard and QR pages live on the makerspace network** — you must be **on WiFi** for those links to open.

- Scanning a QR sticker off-network → the page **won't load**. That's expected.
- Off-site and need status? Use **Slack** (next-to-last section).

Status Dashboard (web)

- Open the ESB web address in any browser — **no login**
- Every tracked machine, **grouped by area**
- Color-coded cards; non-green cards show the **issue + ETA**
- Bookmark it on your phone

Web address: [posted in the space / ask staff]

Equipment Status

Kiosk View ▾

3D Printing

Bambu X1C

✓ Operational

Prusa MK4
#1

✓ Operational

Prusa MK4 #2

⚠ Degraded

First layer adhesion issues.
Possibly needs PINDA probe
recalibration.

Electronics Lab

Hakko Solder
Station

✓ Operational

Reflow Oven

⚠ Degraded

Temperature profile not matching
setpoints. Heating elements may
be degraded.

Rigol
Oscilloscope

✓ Operational

Laser / CNC

Epilog Laser
60W

⚠ Degraded

Slight drift in X-axis homing.
Investigating belt tension.

K40 Laser

✓ Operational

Shapeoko CNC

✗ Down

Z-axis stepper motor losing steps.
Cuts are inconsistent depth.

Metal Shop

Kiosk Displays (in the space)

- Large wall-mounted screens you can read across the room
- **Auto-refreshes** — always current
- Nothing to tap — **just look up** before you head to a tool

QR Codes — scan a specific machine

- Every machine has a **QR sticker**
- Point your **phone camera** at it → tap the link (no app)
- Opens that machine's page showing:
 - Name + area, and a **big status indicator**
 - The current **issue** if it's not green
 - **Known Issues** already being worked
 - **Equipment Info** → manuals & docs

Reminder: you must be on WiFi for the link to open.

Known Issues

If your issue is listed below, it's already being worked on.

Down

Z-axis stepper motor losing steps. Cuts are inconsistent depth.

Report a Problem

Don't see your issue listed above? Let us know.

Your Name *

Your name

Before you report: check Known Issues

- The QR page lists any **open repairs** for that machine
- If your problem is **already listed**, it's already in the queue — **no need to report again**
- Tap **Equipment Info & Documentation** for manuals, quick-starts, and training links staff have attached

Reporting a Problem

Found something broken and *not* already listed? Report it.

1. Scan the QR (or open the machine's page) → scroll to

Report a Problem

2. Fill in:

- **Your name** (*required*) · **Description** (*required*)
- **Severity** — Down / Degraded / Not Sure
- **Safety risk?** checkbox · optional **photo**

3. Tap **Submit Report**

Down

Z-axis stepper motor losing steps. Cuts are inconsistent depth.

Report a Problem

Don't see your issue listed above? Let us know.

Your Name *

Your name

Description *

Describe the problem...

Severity

Not Sure

☐ This is a safety risk

☐ This is a consumable item (e.g., filament, sandpaper)

Email (optional)

your@email.com

Photo (optional)

Choose File

No file chosen

Submit Report

What happens after you report

- A **repair record** is created instantly
- Status updates **everywhere** — dashboard, kiosk, QR page
- Technicians are **notified in Slack**
- Confirmation page tells you **which Slack channel** to follow for progress
- Re-scan the QR anytime to see the current repair status

Report Submitted

Thank you for reporting this issue with
Shapeoko CNC.

Your report has been received and a technician
will review it.

Issue Summary

Severity: Degraded

Spindle bogs down on deeper passes and
the cut depth wanders.

Stay Updated

Follow progress on Slack:

#laser-cnc-repairs — Laser / CNC channel

#oops — All equipment issues

Report Another Issue

← Back to Shapeoko CNC

Slack — check status from anywhere

Type these in **any** Slack channel:

- `/esb-status` — summary of every area
- `/esb-status Woodshop` — full detail for one area
- `/esb-status SawStop` — one specific machine

Equipment Status

Woodshop —  4  1  0

-  DeWalt Planer — snipe on last 2" (ETA Jul 4)

Laser / CNC —  1  1  1

-  Shapeoko CNC — Z-axis losing steps

Tip: /esb-status <area> for one-area detail

Replies are only visible to you. Works off-network — Slack is in the cloud.

Slack — report a problem

- Type `/esb-report` in any channel
- A **form pops up** — same fields as the web form:
 - Equipment · Your Name · Description · Severity · Safety risk
- Submit → instant confirmation with the **repair number**

 *New problem report* — **Shapeoko CNC** (Laser / CNC)

Severity: **×** Down · reported by Jordan Lee

Repair #42 created.

Great when you're not on WiFi, or already chatting in Slack.

Recap — your member cheat sheet

-    **Green good** · **Yellow caution** · **Red do-not-use**
- **Check first:** web dashboard, kiosk screens, or scan the QR
- **Report fast:** QR page form, or `/esb-report` in Slack
- **From anywhere:** `/esb-status` and `/esb-report` in Slack
-  Web + QR need **WiFi**; Slack works everywhere
-  Check **Known Issues** before reporting a duplicate

More help: the **Help / Docs** link on the status page → Members Guide. Questions? Ask any staff member.
